

High Unproductive Fleet Rate Driven by Idle Vehicles and Legal/Insurance Issues

Your fleet has **4,001 unproductive vehicles out of 7,701 total (52%)**, with the vast majority stuck in idle status rather than actively generating revenue.

Root Causes

1. Idle vehicles dominate the unproductive fleet

The unproductive fleet consists of **3,228 idle vehicles (42% of total fleet)** and **644 workshop vehicles (8%)**, with a small number of withdrawn vehicles. Only 48% of your fleet is actively generating revenue.

2. Legal and insurance processes are the primary bottlenecks

The top categories trapping vehicles in unproductive status are:

- **Legal - Report Filing:** 1,120 vehicles (averaging 142 days in status)
- **Workshop - Mechanical Repair:** 382 vehicles (averaging **7,908 days** or ~22 years — indicating long-term stuck vehicles)

- **Legal - Report Case Integration:** 344 vehicles (averaging 224 days)
- **Insurance - Repair:** 321 vehicles (averaging **159,049 days** or ~436 years — clearly data quality issues or extremely prolonged cases)
- **Legal - Units to Readmit:** 309 vehicles (averaging **19,304 days** or ~53 years)

The extreme time-in-status values for insurance and workshop categories suggest either data quality issues or vehicles that have been effectively abandoned in these statuses for years.

3. Brand concentration amplifies the problem

Two brands account for the majority of your fleet and unproductive vehicles:

- **MG:** 3,663 total vehicles with 2,252 unproductive (61.5% unproductive rate)
- **BYD:** 3,404 total vehicles with 1,470 unproductive (43.2% unproductive rate)

Smaller brands like CHIREY (78.8%), KIA (81.5%), and CHEVROLET (92.9%) have even worse unproductive rates, though they represent fewer vehicles.

Brand	Total Vehicles	Unproductive Vehicles	Unproductive
MG	3.7K	2.3K	61.4796614%
BYD	3.4K	1.5K	43.1844888%
CHIREY	137.0	108.0	78.8321167%
GAC	365.0	73.0	
JAC	77.0	52.0	67.5324675%
KIA	27.0	22.0	81.4814814%
CHEVROLET	14.0	13.0	92.8571428%
VW	6.0	6.0	

4. Geographic concentration

The largest concentrations of unproductive vehicles are in:

- **Ciudad de México:** 1,309 unproductive vehicles (48.8% rate)
- **Nuevo León:** 1,028 unproductive vehicles (50.7% rate)
- **Baja California:** 778 unproductive vehicles (67.6% rate — highest among major states)

Recommendations

1.

Expedite legal and insurance processes: The extreme time-in-status values (years to decades) for insurance repair, workshop mechanical repair, and legal readmission categories indicate systemic process failures. Investigate data quality and establish maximum time thresholds with escalation procedures.

2.

Focus on MG brand: With 2,252 unproductive vehicles and a 61.5% unproductive rate, MG represents your largest opportunity for improvement.

3.

Address Baja California operations: This state has a 67.6% unproductive rate, significantly higher than other major markets.

4.

Audit stuck vehicles: The 1,120 vehicles in "report filing" status averaging 142 days suggest a documentation bottleneck that could be streamlined with process improvements or additional resources.
